

The foam that babies you better than fiber.

***A product whose luxury lasts and lasts...
with no lasting impressions.***

StrataFlex™ is a state-of-the-art foam specially designed to replace the polyester fiberfill traditionally used in the top quilted layer of mattresses, as well as in mattress toppers and furniture including cushion wraps and backs .

As time passes, polyester fiber mats down, leaving body impressions even when there's no body there. Not so with StrataFlex. This highly advanced lightweight foam's outstanding strength and durability means it maintains its original loft even after years of use. That virtually eliminates body impressions to help keep beds and furniture looking brand new. And that makes for a more beautiful home...and a happier customer.

The softness of fiber...the durability of foam.

- As Soft As The Highest Quality Fiber
- Longer Lasting Support
- No Fiber Breakdown – Eliminates Body Impressions
- No Fiber Migration – Quilt Pockets Remain Filled and Evenly Distributed
- Better Permeability and Moisture Pickup/ Dissipation For More Comfortable Sleeping and Seating
- Environmentally Friendly
- Hypo-allergenic

*The ideal fiber replacement...
a foam that not only performs
better, but lasts longer.*

With StrataFlex available in full-length rolls, there's less setup time required than when manufacturing with fiber. There's virtually no excess waste material so there's less wear on machinery and less downtime too. It converts and handles easily so you can be more productive on the assembly line. Plus StrataFlex helps products look great in the showroom for a quicker sale.

Specifications

StrataFlex 10

Density 1.0 lbs +- .05
IFD 25% 9-11
90% Compression <12%

StrataFlex 15

Density 1.4 lbs +- .05
IFD 25% 15 +-2
90% Compression <10%

StrataFlex is available to meet all Cal 117 requirements.

StrataFlex adds the ideal finishing touch to any well-made mattress -- a quilted layer of luxuriously soft and comfortable foam that outperforms and outlasts fiber. Or use it in a topper to give new life to an old mattress.

Our Advanced CO₂ Process: The Natural Choice

How do you produce foam of the highest quality and consistency without harmful emissions? At Flexible Foam, we helped pioneer the use of carbon dioxide in foam manufacturing. Quite simply, CO₂ is the most highly developed, environmentally friendly foaming process ever created.

Why is CO₂ Superior?

The CO₂ process provides a highly consistent product without compromising tear or tensile strength. That results in better support, higher cell integrity and longer life. And your customers will notice the difference because it is softer to the touch.

We're totally committed to the CO₂ process... and have implemented the technology in all of our plants so you can be assured of the same consistency no matter where you order.
